Connecting the dots

The Use of Visualizations in Historical Network Research

Matthias Bixler, m.bixler@ikmz.uzh.ch

http://historicalnetworkresearch.org/

The screenshot shows the homepage of the Historical Network Research website. The browser address bar displays 'historicalnetworkresearch.org'. The website header includes navigation links: ABOUT, NEW: HNR JOURNAL, RESOURCES, HNR EVENTS, EVENT CALENDAR, HNR NEWSLETTERS, and NODEGOAT FORUM. A search bar is located on the right side of the header.

The main content area features three large images with corresponding text:

- Left:** A photograph of a large, historic building with two tall spires. Below it, the text reads: "CFP: 12. WORKSHOP HISTORISCHE NETZWERKFORSCHUNG 20.-21.4.2018 IN BREMEN".
- Middle:** A colorful, abstract network visualization with many nodes and connecting lines. Below it, the text reads: "HNR CONFERENCES".
- Right:** A photograph of a city square at night with a church spire. Below it, the text reads: "NEXT HNR CONFERENCE TO TAKE PLACE 10-13 SEPTEMBER 2018 IN BRNO, CZECH REPUBLIC".

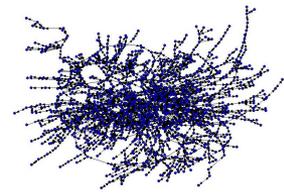

Below these images are three more images with corresponding text:

- Left:** A network diagram with a central node and many smaller nodes connected by lines. Below it, the text reads: "INAUGURAL ISSUE OF THE JOURNAL OF HISTORICAL NETWORK RESEARCH OUT NOW".
- Middle:** A photograph of various wooden tools and hardware. Below it, the text reads: "TOOLS, BLOGS & TUTORIALS".
- Right:** A photograph of a bookshelf filled with books. Below it, the text reads: "BIBLIOGRAPHY".

On the left side of the page, there is a sidebar with the following elements:

- Historical Network Research** logo and tagline: "Network analysis in the historical disciplines".
- HNR NEWSLETTER** section with a "Your E-mail Address" input field and a "SUBSCRIBE" button.
- Text: "Or follow @HNR_org for the Newsletter and Bibliography updates".
- SEE ALSO** section with links to "Réseaux et Histoire", "Connected Past", "Topographies of Entanglements".
- Social media icons for Facebook, Google+, Twitter, LinkedIn, and a plus sign for more options.

At the bottom of the page, there are two sections: "WELCOME" on the left and "UPCOMING EVENTS" on the right, separated by a horizontal line.

THE 12TH WORKSHOP IN BREMEN ON COMMUNICATION

Call for Papers 12. HNR-Workshop „Historische Netzwerkforschung“ „Kommunikation in Netzwerken – Netzwerke der Kommunikation. Thematische, methodische und theoretische Perspektiven historischer Netzwerkanalyse zwischen Geschichts- und Kommunikationswissenschaft

20- 21. April 2018 Zentrum für Medien-, Kommunikations- und Informationsforschung Universität Bremen

Organisation: Dr. Erik Koenen (Universität Bremen) & Matthias Bixler (Universität Zürich)

Deadline for abstract
submissions: 31.01.2018

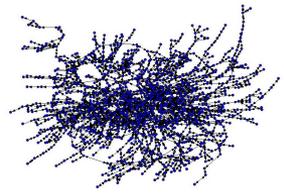

Workshop I: Einführung in die
Visualisierung und Analyse von
Netzwerkdaten für Historiker
(Matthias Bixler & Martin Stark)

Workshop II: Einführung in
Nodegoat
(<https://www.nodegoat.net>)

What is Historical Network Research?

What is Historical Network Research (HNR)?

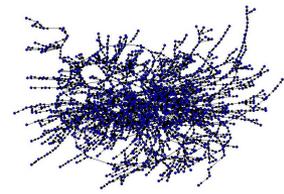

Historical Sociology – History – Digital Humanities

Historical Network Research tries to adapt theories and methods from social network analysis (SNA) and make them fruitful for historical research.

Explanans: network structure

Explanandum: agency

- mostly descriptive structural measures and visualizations
- derive relational data from sources and describe a historical network for the first time

What is a (social) network?

Ein Netzwerk ist «definiert als eine abgegrenzte Menge von Knoten oder Elementen und der Menge der zwischen ihnen verlaufenden sogenannten Kanten.»

(Jansen 2006, S. 58)

«A social network consists of a finite set or sets of actors and the relation or relations defined on them.»

Wasserman & Faust (1994, S. 20)

$$\mathcal{I} = \langle S, \mathcal{G}_d, \mathbf{X}, \mathbf{A} \rangle$$

Wasserman & Faust (1994, S. 91)

Research designs in SNA

- **Egocentric network**

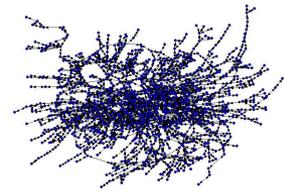

One focal actor and his relationships

- **One-mode network**

One type of actors that are linked with each other

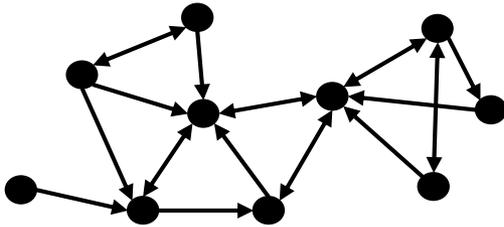

- **Two-Mode Netzwerke**

Two distinct types of actors, where actors are only linked with actors of the other type

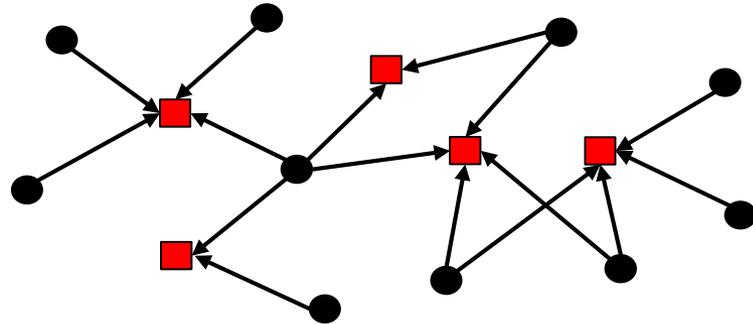

Types of networks

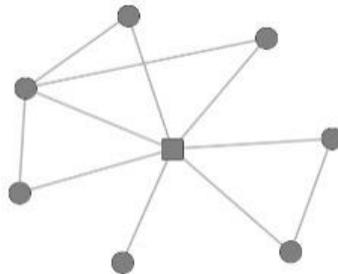

One-mode network

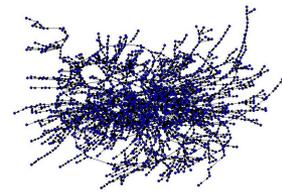

Two-Mode network

Egocentric network

Duality of «social networks»

“Networks are **phenomenological realities** as well as **measurement constructs**.

White (1992, S. 65)

Real-life social networks and network data are *not identical!*

Reality

dynamic

multiplex

multi-mode

Data

static

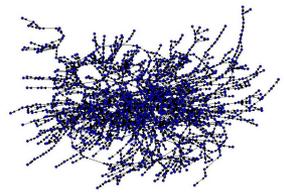

uniplex

one-mode

Network graphs – when, why and how?

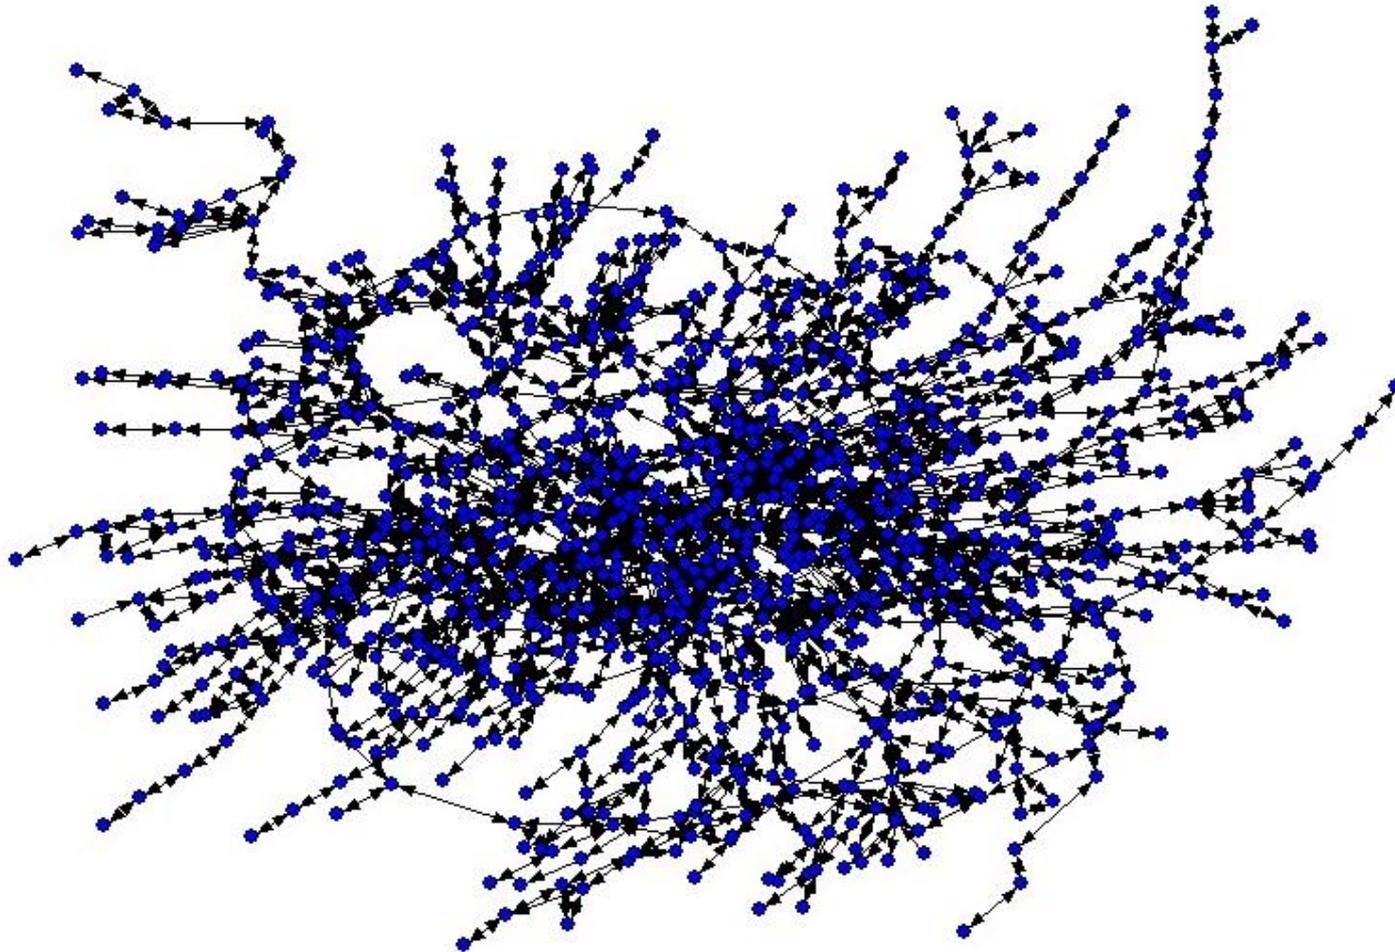

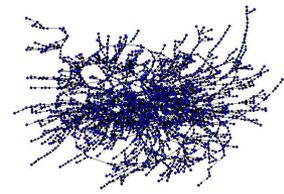

Network graphs – when and why?

- Network graphs are amounts of visually ordered data.
 - Various layouts that provide specific types of information.
 - Frequent purposes of network graphs:
 - Giving insight to the researcher
 - Presenting results to an audience
 - Showing off
- Often very ugly
- Often very pretty
- Often very unuseful

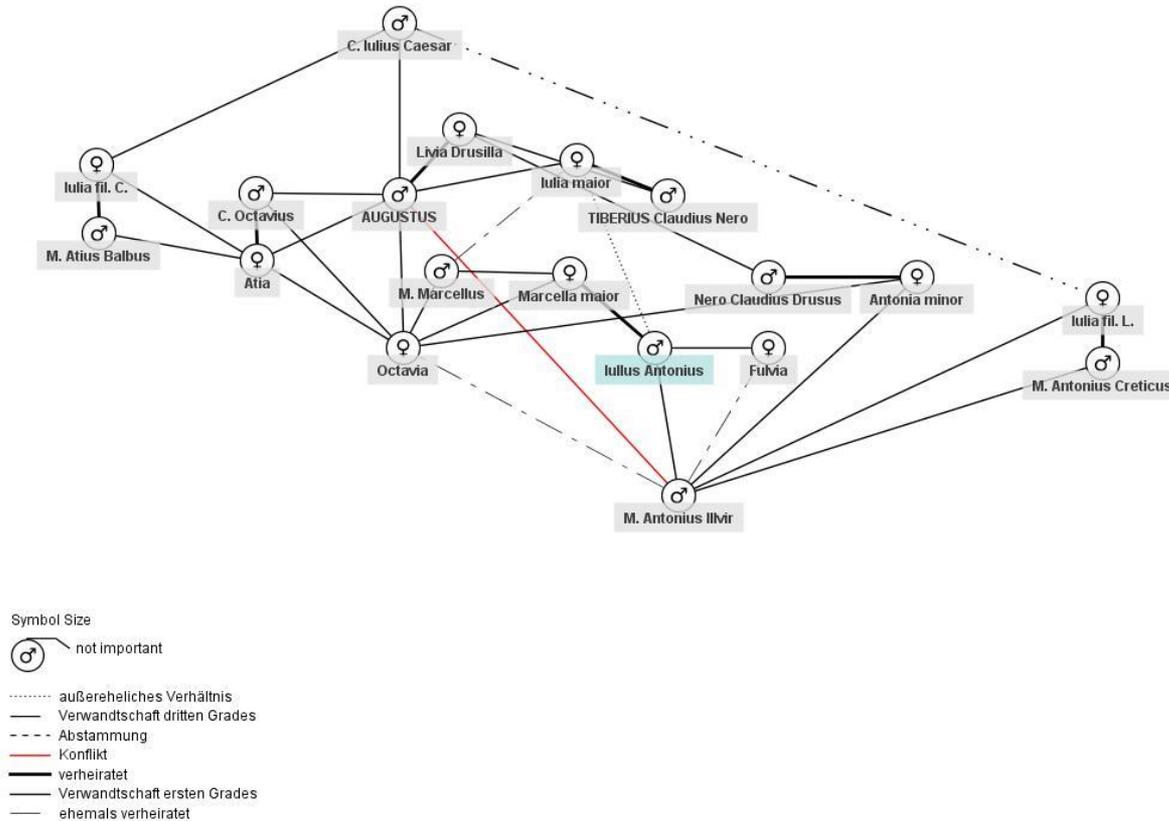

Test visualization – roman senator network

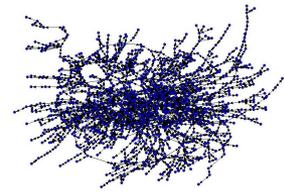

Julio-Claudian family network in 2 BC (work in progress)

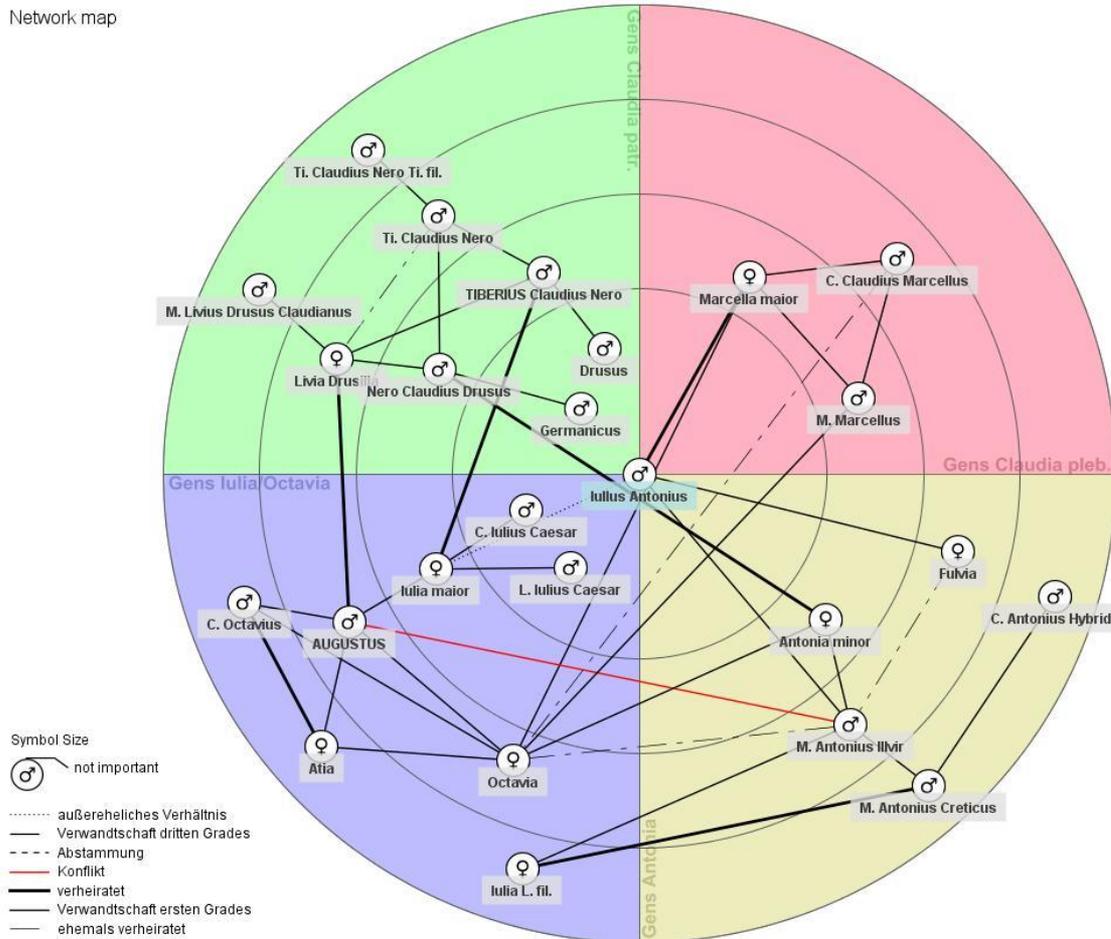

Network map

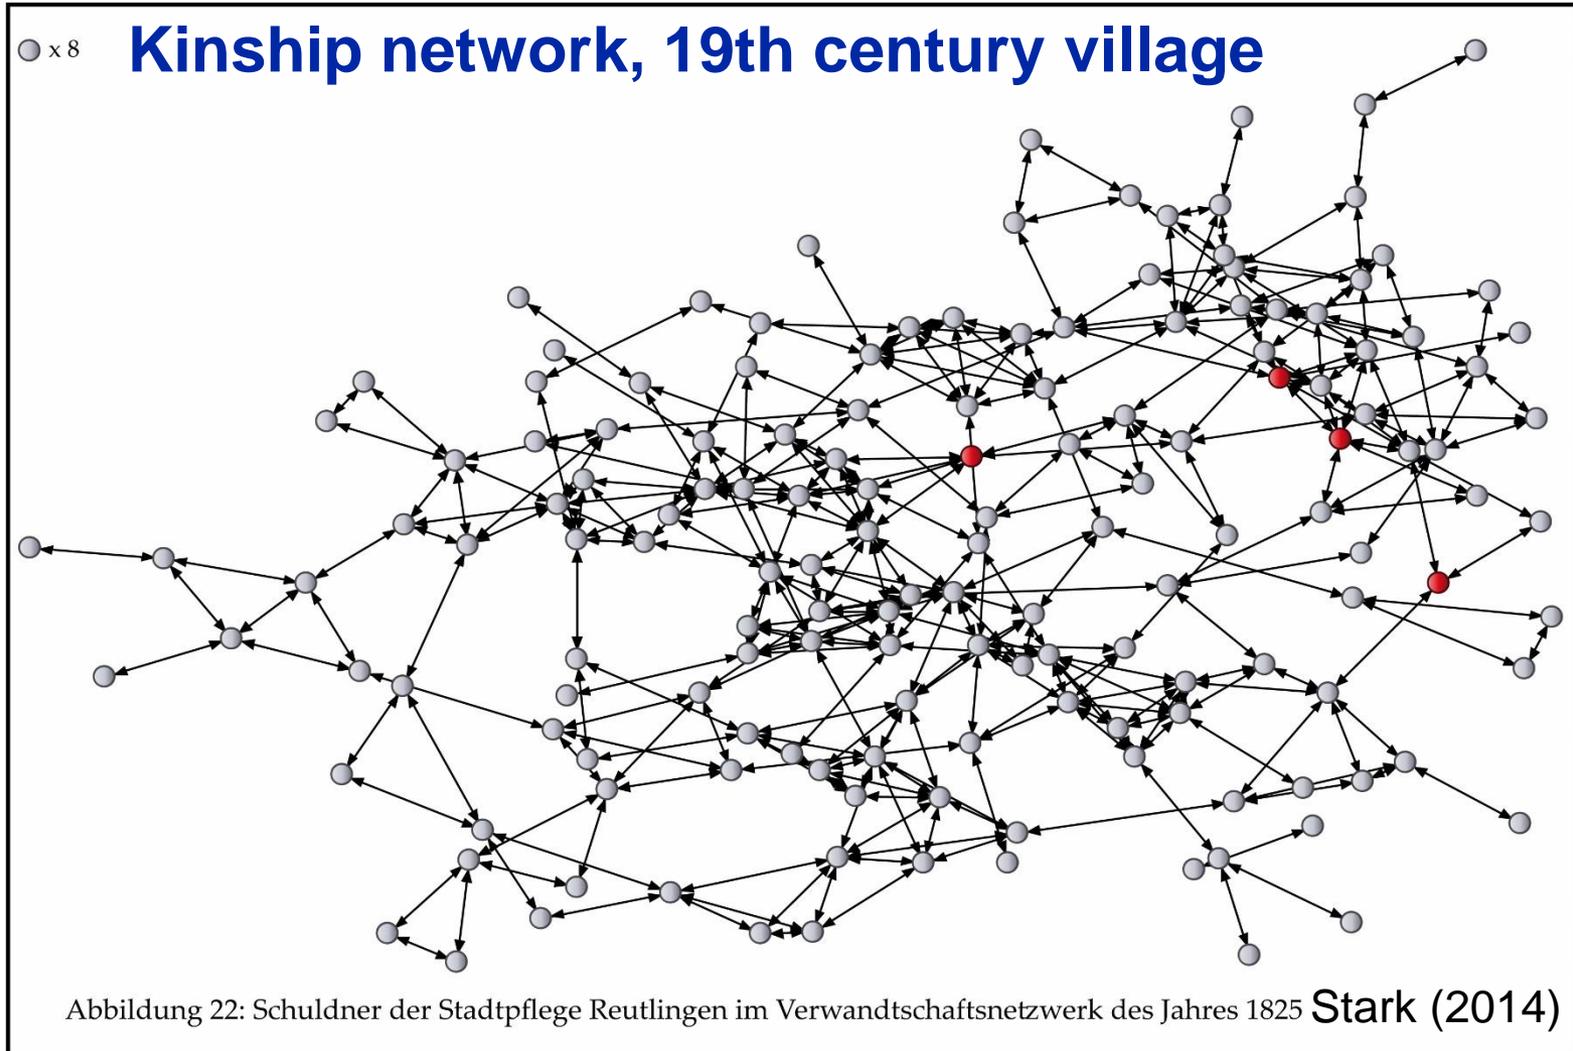

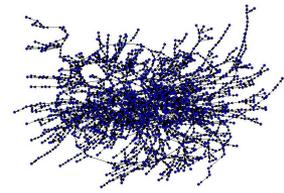

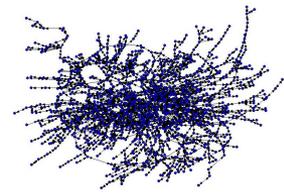

Julio-Claudians ordered by gens (published)

Network map

Mapping historical networks in time and space

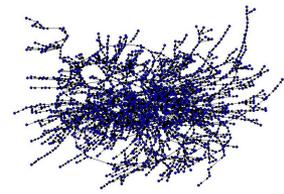

Mapping historical networks in time and space

Geographical space

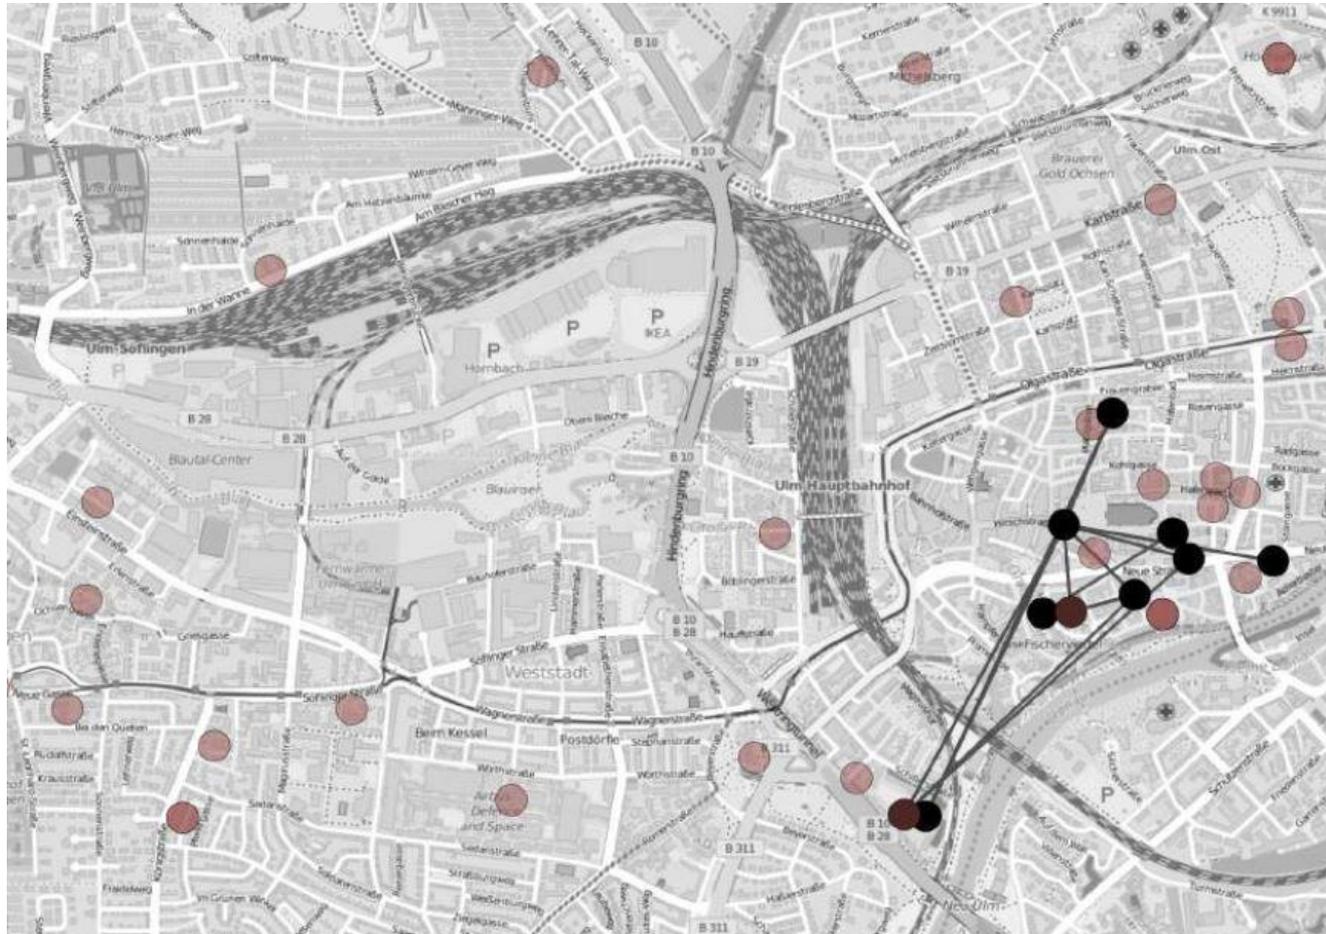

- Network topology vs. geographical topology
- Put a map in the background
- Map GIS data
- Combinations of network and geographical topology

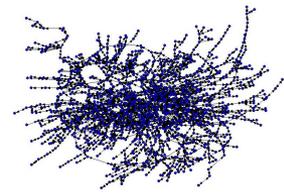

The problem of longitudinal data

- Cross-sectional networks from longitudinal data
- Time slices
 - Cross-sections
 - periods

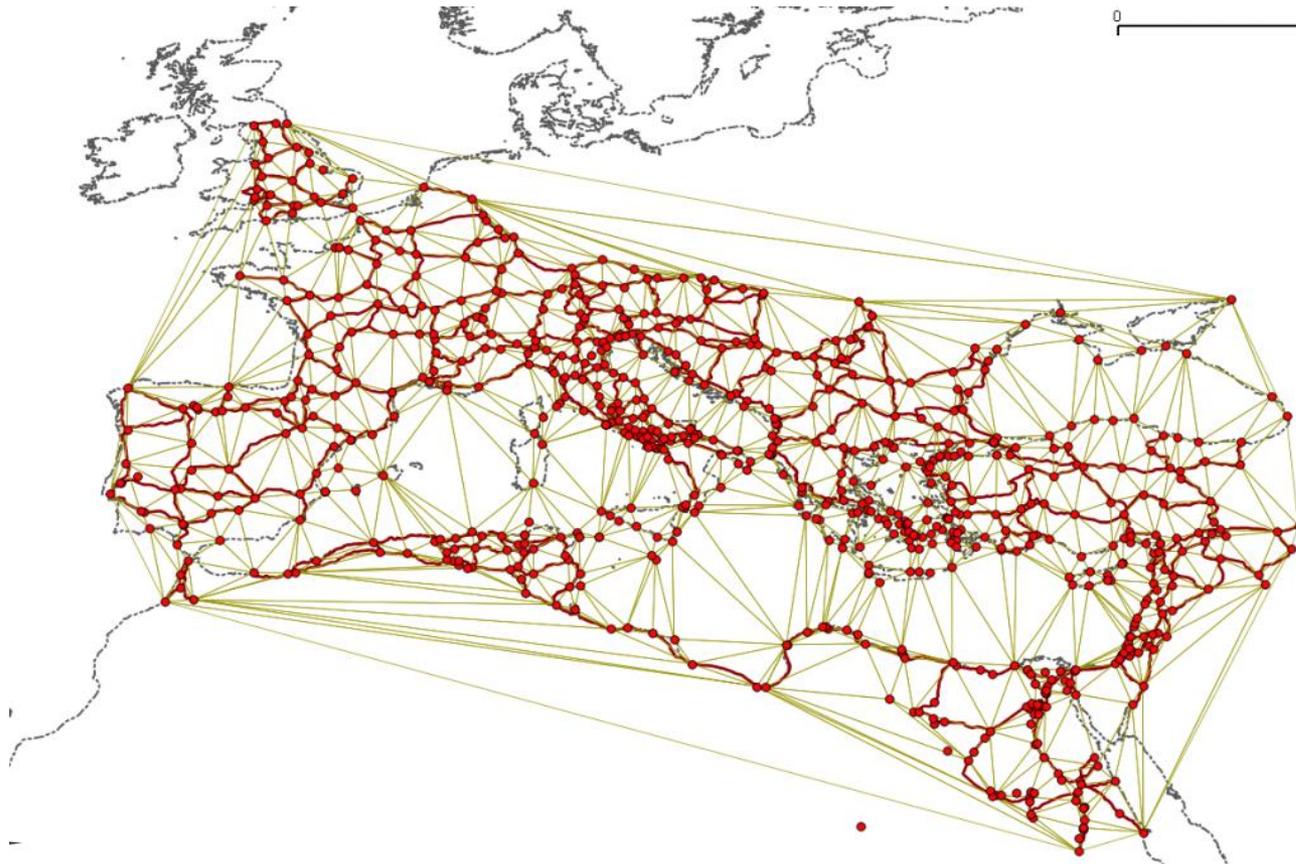

Networks in geographical space (GIS data)

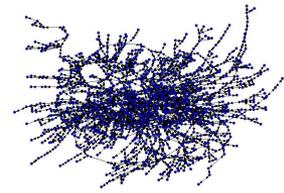

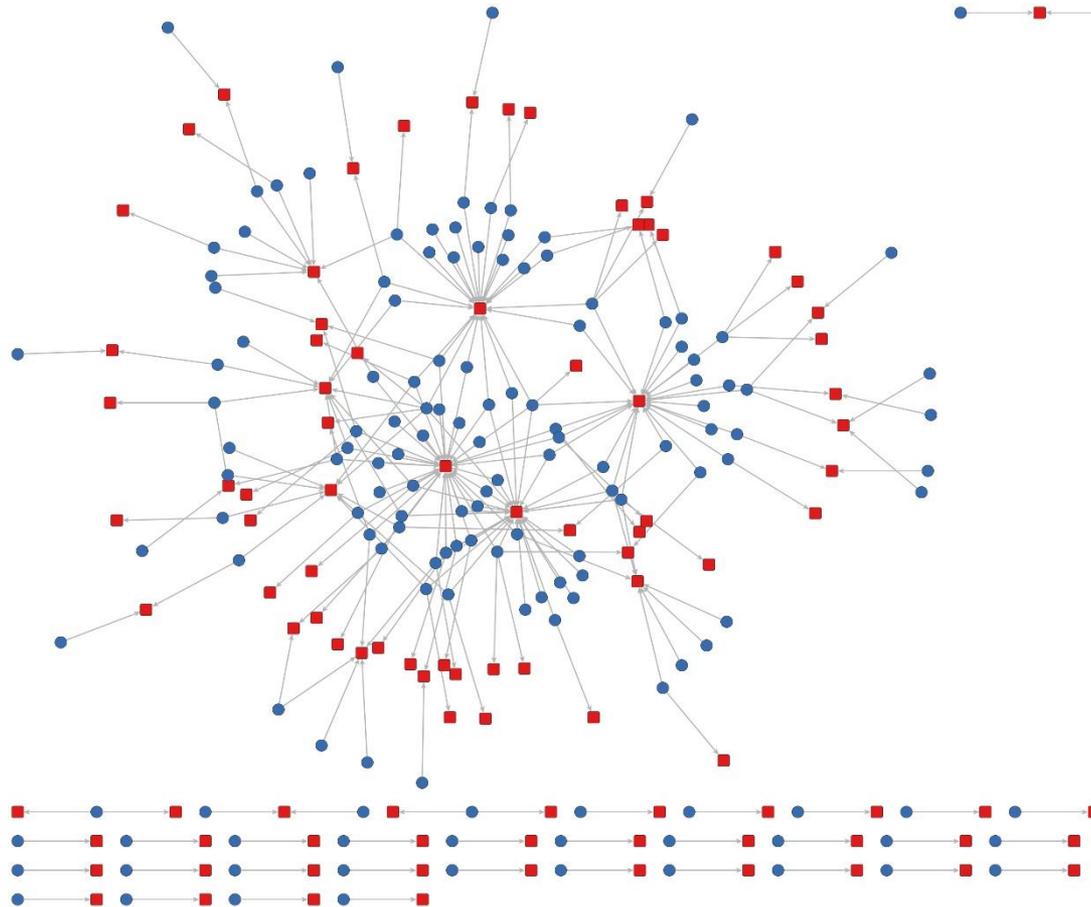

Combination of GIS and network topology

Network graphs for librarians?

Books and network data

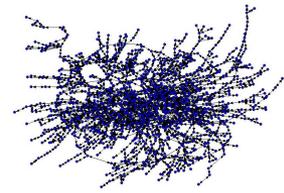

- Books are bundles of ordered information – data!

2 types of data:

- content
 - people, places, events, social ties
 - semantic networks, ideas, concepts
- meta-information
 - authors, places, material, topics, ...

- Give it a try!

Beginner-level software

<http://www.vennmaker.com/>

Open source, designed for collection of egocentric networks in sociology and anthropology.

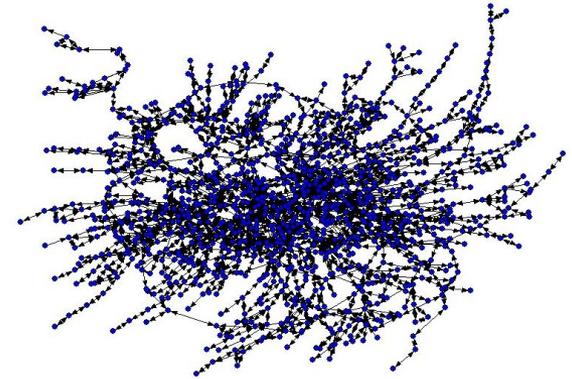

<http://visone.info/>

Free software, powerful tool for analysis and visualization of all kinds of network data.
